

# EXECUTIVE SUMMARY REPORT

## DeForest High School STEM Addition and Remodeling

July 8<sup>th</sup>, 2016

### Finishes have begun!

Both the interior and exterior of the building is starting to shape up! Painting has started in the shop spaces, and drywall has been hung in the STEM collaboration space. Classrooms in the existing part of the building have been framed, and are almost ready for drywall. The clerestory glass has been installed, and the "Nichiha" fiber cement board siding panels are being installed

### The Past Week

- MEP overheads & rough-Ins
- Painting in the shop spaces
- Installation of clerestory glass
- Spray applied fire proofing installation
- Hanging Drywall in STEM space
- Installation of "Nichiha" Panels

### Coming Up in the Weeks Ahead

- Exterior Glazing
- Drywall taping and finishing in the STEM space
- Hanging drywall in the existing building
- "Nichiha" panel Installation
- Interior painting

The "Nichiha" siding is being installed

Painting has started in the shop spaces!

Glass has been installed at the clerestory

Drywall has been hung in the STEM collaboration space, and will be hung in the existing building starting next week

**Did you know?** The first interior painting was done roughly 40,000 years ago by cave dwellers. They even used stencils in some of the work and "spray-painted" by blowing paint through hollow bird bones (Source: Paint Quality Institute)
